Giving Shape to Ideas

JOB-TICKET BASED WEB SUBMISSION
AROUND THE CLOCK

As a sophisticated web-to-print application, AccurioPro Flux Ultimate enables print service providers, in-house printshops, public authorities and the educational sector to offer secure, job-ticket based online submission of print jobs. End users can take advantage of this convenient service 24 hours a day, 7 days a week.

Combining online job submission, online payment and online status tracking in one professional web-to-print application, AccurioPro Flux Ultimate is the perfect tool for any print provider of web printing services running his or her own server environment.

AccurioPro Flux Ultimate is the most comprehensive product version of the AccurioPro Flux Suite, in which the web-to-print functionality is enriched with make-ready and workflow management capabilities.

KEY **FEATURES**

✎ General

– **Single sign-on:** Thanks to this, users who have already logged in to the company network, gain access to the web shop without being prompted to log in again. (SAML 2.0; IWA – Integrated Windows Authentication)

– **Forms:** With this feature, print shops can offer a convenient possibility to order personalised print products online, for example business cards. The print provider simply deposits the corresponding layout template for this customer in Flux Web. The customer now only needs to fill out the predefined text fields with the required data – there's no need to send a new print file for every new name or other changes.

✎ Online job submission

– **Convenient online ordering:** Customers can comfortably upload and preview their jobs before ordering. Print-ready documents can be made available in catalogues; non-print articles can also be offered for ordering.
– **Preflighting:** The application checks if files are printable, images provided by the customer have the proper resolution, fonts are embedded and transparencies have been included.

– **Different order workflows:** Customers can choose between the quick 2-step order process and a shopping cart (4 steps), which enables users to combine several products in one order.

✎ Online payment

– **Instant online quotation:** The application instantly calculates the price for each print product. Every detail, such as monochrome or colour output, paper size and type, is included in the automatic calculation.
– **Online payment:** Secure payment options can be made available to customers to pay online without risk.

✎ Online status tracking

– **Dashboard:** The application lets users check their job status at any time online via the software dashboard.
– **Notifications:** Users can also be informed via e-mail about the status of their print jobs.

| AccurioPro Flux Ultimate options	
Flux Document Converter	Allows uploading up to 300 different file formats (including .doc, .xls, .ppt, etc.) to the web-to-print portal so that customers do not need a specific converter application.
Flux Multi Shop	Enables print providers to create dedicated web shops with individual user interfaces, products and price lists for different user groups.

✎ Scalability for complete flexibility

As a highly scalable software suite, AccurioPro Flux makes available a range of tools to organise, automate and optimise a company's entire print workflow. The suite comprises three differently featured software versions:
– The entry-level product, AccurioPro Flux Essential, offers essential prepress functions including tools for make-ready and output management.
– In addition to this functionality, the product version AccurioPro Flux Premium also includes automation, reporting and internal job submission.

– Beyond all this, the most comprehensive product version, AccurioPro Flux Ultimate, provides the functionality of a web-to-print online shop.

Flux Essential — Flux Raster Editor

Flux Premium — Flux Preflight Connector, Flux Multi Seat, Flux Accounting Connector, Flux Raster Editor

Flux Ultimate — Flux Document Converter, Flux Multi Shop, Flux Preflight Connector, Flux Multi Seat, Flux Accounting Connector, Flux Raster Editor
